Rear Adm. V. L. Lowrance, USN
Assistant Chief of Naval Operations (Intelligence)
The Pentagon
Washington 25, D.C.

Dear Admiral Lowrance:

CIA has been very much interested in and appreciative of the work done by the Naval Research Laboratory in the interception of radar signals by utilization of "moon bounce". Of particular interest has been the reported intercept of a number of TALL KING radars.

The determination of location of the TALL KING radars in the interior of Soviet Russia is of particular interest to CIA and, of course, to the whole intelligence community. I would appreciate any effort you might make to insure continued priority attempts to collect TALL KING signals and to refine the determination of the locations of these radars.

Sincerely,

OK
